September 6 - Professor Stephen Craig  
*Duke University*  
“Pulling the Limits of Chemical Reactivity: From Fast Forbidden Reactions to Self-Strengthening Polymers and Soft Devices”

September 13 – Professor Art Bragg  
*Johns Hopkins University*  
“Structure, Dynamics, and Disorder in Excited States of Photoresponsive Conjugated Materials”

September 20 – Professor Jonathan Scheerer  
*College of William and Mary*  
“Cycloaddition and Cycloreversion Sequences: Synthesis of the [2.2.2]Diazaabicyclic Skeleton and 2-Pyridone Alkaloid Core From a Common Intermediate”

September 27 – Professor Rod Bartlett  
*University of Florida*  

October 18 – Professor Paramjit Arora  
*New York University*  
“Mimicry of Protein Surfaces with Peptides and Peptidomimetics”

October 25 – Professor Robert Metzger  
*University of Alabama*  
“The Smallest Rectifier, and Review of Unimolecular Electronics”

November 1 – Professor Squire Booker  
*Pennsylvania State University*  
“Radical Strategies for Methylation of Biomolecules”

November 8 – Professor Rein Ulijn  
*CUNY Advanced Science Research Center*  
“Design and Discovery of Peptide Nanostructures”

November 15 – Professor Poul B. Petersen  
*Cornell University*  
“Giving IR Spectroscopy a Boost: New Methods for Studying Interfaces, Chirality, and Strongly Hydrogen Bonded Complexes”

November 29 – Professor Hemamala Karunadasa  
*Stanford University*  
“The Molecular Chemistry of Extended Solids: Functional Hybrid Perovskites”

December 6 – Professor Shiv Halasyamani  
*University of Houston*  

December 13 – Professor Tadhg Begley  
*Texas A&M University*  
“New Catalytic Motifs in Flavoenzymology”
